

Interpretable ML for biodiversity

An introduction using species distribution models

Timothée Poisot

Université de Montréal

September 28, 2024

MAIN GOALS

1. How do we produce a model?
2. How do we convey that it works?
3. How do we talk about how it makes predictions?
4. How do we use it to guide actions?

THE STEPS

1. Get data about species occurrences
2. Build a classifier and make it as good as we can
3. Measure its performance
4. Explain some predictions
5. Generate counterfactual explanations
6. Briefly discuss ensemble models

BUT WHY...

... think of SDM as a ML problem? Because they are (and would be better if we accepted this)

... the focus on explainability? We cannot ask people to *trust* - we must *convince*

§ 1

Introduction

GETTING DATA

GETTING A POLYGON

CHELSA2 DATA

TRIMMING POLYGON

DOWNLOAD DATA FROM GBIF

§ 2

Validation

PSEUDO-ABSENCES

SDM Layer with 45336 Bool cells

Proj string: +proj=longlat +datum=WGS84 +no_defs

Grid size: (239, 543)

§ 3

Model setup

SETUP

```
SDeMo.MultivariateTransform{MultivariateStats.PCA} → SDeMo.NaiveBayes → P(x  
) ≥ 0.5
```

CROSS-VALIDATION

0.5620979518435002

RE-TRAINING

```
SDeMo.MultivariateTransform{MultivariateStats.PCA} → SDeMo.NaiveBayes → P(x  
) ≥ 0.281
```

INITIAL PRED

SDM Layer with 69967 Float64 cells

Proj string: +proj=longlat +datum=WGS84 +no_defs

Grid size: (239, 543)

VISU

Prediction

§ 4

Why?

CODE

Shapley values

Partial response

MOSAIC

SDM Layer with 69967 Int64 cells

Proj string: +proj=longlat +datum=WGS84 +no_defs

Grid size: (239, 543)

VISU

§ 5

About ensemble models

UNCERTAINTY

0.6537641876644507

ADD PRED

SDM Layer with 69967 Float64 cells

Proj string: +proj=longlat +datum=WGS84 +no_defs

Grid size: (239, 543)

Prediction

Uncertainty
